The diagram illustrates the flow of funds from a deposit to an interest payment, then to a paid account balance, and finally to a deposit in a bank account. It consists of several rectangular boxes connected by arrows, representing the movement of money between different entities or accounts.

- Top Row:** A box labeled "Deposit" is connected by an arrow to a box labeled "interest". This "interest" box is then connected by an arrow to a box labeled "interest" again, which is further connected to a box labeled "interest" and finally to a box labeled "interest".
- Middle Row:** A box labeled "Deposit" is connected by an arrow to a box labeled "interest". This "interest" box is then connected by an arrow to a box labeled "interest", which is further connected to a box labeled "interest" and finally to a box labeled "interest".
- Bottom Row:** A box labeled "Deposit" is connected by an arrow to a box labeled "interest". This "interest" box is then connected by an arrow to a box labeled "paid", which is further connected to a box labeled "account", which is then connected to a box labeled "balance". This "balance" box is then connected by an arrow to a box labeled "deposit".

The chart displays the following data series:

- deposits**: A bar with 10 segments of varying lengths.
- total**: A bar with 10 segments of varying lengths.
- deposit**: A bar with 10 segments of varying lengths.
- deposits**: A bar with 10 segments of varying lengths.
- available**: A bar with 10 segments of varying lengths.
- in**: A bar with 10 segments of varying lengths.
- in**: A bar with 10 segments of varying lengths.
